

FIRST QUARTER 2009

PIMCO All Asset Fund

PIMCO All Asset Fund utilizes an active asset allocation approach to invest in a portfolio of mutual funds managed by PIMCO. The chart below shows portfolio manager Robert Arnott's quarterly sector strategy allocations. Fund allocations are shown on the reverse.

All Asset Fund Product Chart

PIMCO continued to maintain a defensive, high quality focus in the face of lingering uncertainty about government policy. Going forward the Fund is likely to:

- Maintain an overall defensive posture while modestly increasing riskier assets given lower prices of risk assets and normalizing markets.
- Moderately reduce long-dated TIPS but maintain a sizeable allocation.
- Increase allocations to investment grade credit.
- Continue to increase exposure to commodities.
- Retain overall low equity exposure.
- Within the underlying PIMCO Funds, we will likely retain focus on cash, collateral and counterparty risk management as the credit crisis persists.

Investors should consider the investment objectives, risks, charges and expenses of this Fund carefully before investing. This and other information is contained in the Fund's prospectus, which may be obtained by contacting your financial advisor, by visiting www.allianzinvestors.com or by calling 1-888-877-4626. Please read this prospectus carefully before you invest or send money.

The Fund's performance will depend on how its assets are allocated and reallocated among constituent Funds. There is no assurance that the investment objective of any underlying fund will be achieved. The allocation among the underlying Funds will vary, and the investment may be subject to any and all of the following risks at different times and to different degrees. Investing in smaller companies may entail greater risk than investing in larger companies, including higher volatility. Investing in non-U.S. securities may entail greater risk due to foreign economic and political developments; this risk may be enhanced when investing in emerging markets. The underlying funds may at times invest in mortgage-related securities and may use derivative instruments for hedging purposes or as part of an investment strategy. Mortgage-backed securities are subject to prepayment risk and may be sensitive to changes in prevailing interest rates. When interest rates rise, the value of fixed income securities generally declines.

Use of derivative instruments may involve certain costs and risks such as liquidity risk, interest rate risk, market risk, credit risk, management risk and the risk that a fund could not close out a position when it would be most advantageous to do so. Portfolios investing in derivatives could lose more than the principal amount invested in those instruments. High-yield bonds generally involve a greater risk to principal than higher rated bonds. Inflation-indexed bonds issued by the U.S. Government, known as TIPS, are fixed-income securities whose principal value is periodically adjusted according to the rate of inflation, which will affect the interest payable on them. Repayment upon maturity of the adjusted principal value is guaranteed by the U.S. Government. Neither the current market value of inflation-indexed bonds nor the share value of a fund that invests in them is guaranteed, and either or both may fluctuate. Investments in commodities may be affected by overall market movements, changes in interest rates, and other factors such as weather, disease, embargoes and international economic and political developments. The cost of investing in the Fund will generally be higher than the cost of investing in a mutual fund that invests directly in individual stocks and bonds. The Fund's NAV will fluctuate in response to changes in the NAV of the underlying Funds.
